

[Why are transnational cooperation or cross border projects important in FP7 projects?](#) ^[1]

Category:

[IP in FP7 in general](#) ^[2]

In order to complement national research programmes, activities funded from FP7 must have a 'European added value'. One key aspect of the European added value is the transnationality of many actions: research projects are carried out by consortia which include participants from different European (and other) countries; fellowships in FP7 require mobility over national borders. Indeed, many research challenges (e.g. fusion research, etc), are so complex that they can only be addressed at European level.
